AutoCAD is more than a CAD program. It can also serve as a digital imaging software application for imaging and scanning purposes, as well as a digital 3D modeling program. From an economic perspective, AutoCAD has been estimated to contribute between \$2 and \$5 billion per year to the U.S. economy and has been identified as one of the most important software products in the world. AutoCAD may be used in the fields of architecture, engineering, manufacturing, and construction. In 2010, the Council of Economic Advisers reported that AutoCAD alone accounts for \$1.1 billion

in annual government revenue, and \$5.4 billion in state and local government revenue. AutoCAD is also used for the development of video games, as well as for motion picture production. A description of AutoCAD's hardware requirements, installation, and configuration can be found here. Installation of AutoCAD can also be attempted from the CD or DVD release. The AutoCAD User Guide, a book that serves as an instruction manual, is available to download from Autodesk. Ad How AutoCAD Works You can create digital drawings in AutoCAD with a mouse, keyboard, touch screen, stylus, or one of Autodesk's many onscreen drawing tools. Drawing objects with the

mouse is the simplest way to create a CAD drawing. When you click and drag on a drawing canvas, a line is automatically drawn from where you started dragging to where you click. This is AutoCAD's simplest way of creating line drawings. You can also draw using the traditional digital pen and drawing tablet technology used by most CAD programs. AutoCAD is designed to adapt to traditional drawing equipment by following your movements on the drawing canvas. When you click or drag a line, the path of the line is automatically drawn on the drawing canvas using the digital pen. You can also draw a line using the direct selection tools on the drawing canvas by selecting an area on the canvas, then

clicking the mouse to create a line. AutoCAD is a shape-based drawing application. When you draw an object, AutoCAD scans the image on your screen to determine the shape of the object you are drawing. Once the shape of your object is recognized by the drawing software, the object is created on the drawing canvas. For example, a right-angle bracket is drawn by first drawing a rectangle, then drawing a line from one

design software for WindowsA survey of
selected antimicrobial activity of essential
oils obtained from a dominant genus of
medicinal plants (*Ziziphora*) growing wild
in Egypt. The use of essential oils (EOs)
has long been recognized as a potential
complementary and alternative therapy
for the treatment of several disorders. The
present study was carried out to evaluate

the antimicrobial activities of EOs obtained from the aerial parts of a dominant plant species, *Ziziphora* species (also known as *Lavandula*, as well as *Lavandula*), grown wild in Egypt. VOCs (volatile organic compounds) of the selected EOs were extracted by hydrodistillation and analyzed by gas chromatography-mass spectrometry (GC-MS). The different extracts were tested for their antimicrobial activities against eight bacterial and fungal strains. EOs obtained from the leaves of *Ziziphora areophthalmus*, *Ziziphora persica*, and *Ziziphora vulcanica* showed significant inhibitory activity against *Salmonella enteritidis*, *Bacillus cereus*, and *Pseudomonas aeruginosa*. Only the EO

obtained from the leaves of *Ziziphora persica* exhibited mild antifungal activity against *Candida albicans*. Phytochemical analysis showed the presence of significant amounts of oxygenated monoterpenes and monoterpene hydrocarbons. The total content of identified compounds was in the range of 13.98-57.52% in the EOs obtained from the leaves of *Ziziphora* species. The antimicrobial activities of the EOs from the leaves of *Ziziphora* species could be attributed to the presence of the identified constituents.

The motivation for the study of a health professional education by the learning

theories in the group of students who studied at the Faculty of Health Sciences of the University of Ljubljana is presented. Students were asked to list the learning theories which they have found important for understanding the term 'professionalism'. These theories were then checked against the teaching strategies and learning theories proposed by Botti and which were also found in the terms 'professional' and 'student'. Student attitudes, motivations and knowledge related to the learning theories were also measured. Results show that academic values, motivations to learn and the belief in students' abilities are, by far, the most significant factors which motivate students to learn. The learning strategies

mostly used by students are directed teaching, and the teaching strategies are: presentation, support, and guidance in learning. The majority of the students did not find the theories proposed by Botti and Srinivasan useful for understanding the term 'professionalism'. Lester Dent

Lester Dent is a former Commissioner of the Georgia Bureau of Investigation and was Georgia's first openly gay public official, having been elected in 2002. He was born in 1950, in Macon, Georgia, the son of John D. Dent and Dorothea H. Dent. In 1976, he graduated from the University of Georgia with a Bachelor of Arts degree in psychology and sociology, and from Mercer University School of Law with a Juris Doctor in 1979. He was

admitted to the practice of law in 1979 and was admitted to the practice of family law in 1990. He is also admitted to the practice of public law. Dent was elected to the Board of Commissioners of the GBI in 1999 and re-elected to his current position on November 6, 2002. He was sworn in as GBI Commissioner on December 18, 2002 and sworn in as Georgia's first openly gay public official in the nation. He also served on the
